

LP SMARTSIDE ADVANTAGE

LP SmartSide Trim and Siding products offer all the warmth and beauty of traditional wood, along with all the advantages of LP high-performance treated engineered wood.

Our technologically advanced wood substrate actually improves upon nature, creating products that are more durable and consistent than traditional wood materials. They work and cut just like traditional wood, with no special tools required. And their backed by our 10-Year Limited Warranty.*

In addition to the impressive consistency and outstanding workability, LP SmartSide Trim & Siding products offer the remarkable protection of our proprietary SolidGuard® manufacturing process. Every step of the SolidGuard process is designed to make the most durable product possible. That includes the application of zinc borate throughout the substrate to create materials that resist both fungal decay and termite damage.

BEAUTIFUL. DURABLE. WORKABLE

- Complies with the Building Code of Australia
- H3 treated (South of the Tropic of Capricorn) against termite attack. AS/NZS 1604.2:2010 Specification for preservative treatment - reconstituted wood-based products
- Structural panel providing equivalent, or better, bracing performance than standard Plywood bracing panels or other bracing systems as per AS1684 parts 2 & 3 section 8
- R-rating value of 0.08 K.m2/W, which can be used in conjunction with other elements of the wall to calculate the energy efficiency
- LP uses SFI® certified forest management and procurement systems, which help ensure wood comes from well managed forests.
- Pre-primed finish, with paper overlay, provides paint-ready surface with low paint absorption
- Deeply embossed wood grain appearance, resists splitting, warping, delamination and buckling
- A cleaner, more efficient installation process with no silica dust, unlike fibre cement products
- 10-Year Limited Warranty.*
