

**SOLIDSTART®**  
ENGINEERED WOOD LVL

## LP® SolidStart® LVL Truss Chords

Whether you need straighter, longer lengths or I-Joist compatible depths for attic and girder truss applications, LP® SolidStart® LVL offers strengths and lengths beyond traditional timber.

LP SolidStart E14 (F17) LVL Truss Chords are an ideal alternative to traditional timber or hardwood truss chords, and they can be identified easily by a unique stamp from our manufacturing facility. In addition to LP's customary quality assurance procedures, LP SolidStart LVL Truss Chords undergo truss plate connection testing to assure structural performance in real world truss chord applications.
