

LP ELEMENTS™ PERFORMANCE FENCING FAQ

1. What is engineered wood fencing?

LP Elements™ Performance Fencing is an engineered wood fencing. Engineered wood fencing is a new material category in the fencing industry that offers greater durability than wood and vinyl, utilizing strand technology that has been a proven part of the homebuilding industry for decades. Rectangular wood strands blended with thermal-set, water-resistant adhesives are arranged in cross-directional layers that are consolidated under extreme pressure to create stiff, strong and durable products.

2. Is the appearance and texture the same on both sides of the product?

LP Elements Performance Fencing has deeply embossed cedar grain patterns for a natural look on one side and a brushed finish on the other. Either side, depending upon the homeowner's preference, can be installed to be outward facing.

3. Is the product's treatment consistent all the way through the product?

Every strand is coated with resins, wax and zinc borate, following a strict quality control process when manufactured.

4. Will the product splinter, crack or warp?

LP Elements Performance Fencing has been treated to the core with protective waxes and resins, giving it resistance to splitting, cracking or warping.

5. What is the weight of the picket?

The product weighs approximately six pounds.

6. Do I need special fasteners?

Staples are not recommended when installing LP Elements Performance Fencing. See Installation and Maintenance Instructions.

7. Does this product require any special tools?

LP Elements Performance Fencing has been designed and manufactured to comply with regular fence installation with no special tools required. See Installation and Maintenance Instructions.

8. Can I cut the top of the fence pickets?

No. The top of the picket is a beveled, dog-ear design that helps prevent moisture at the top of the picket. Cutting the top of the picket is not recommended and will void the warranty.

9. Do I have to paint the posts and rails?

Painting the post and rails is not a requirement but a choice of the customer.

10. Can the product be installed horizontally?

This product is designed, tested and warranted for a vertical application; however, LP is currently testing horizontal application and it will be coming soon.

11. Can this product be stored outside?

Store pickets off the ground on a flat well-supported, well-drained surface, covered and dry.

12. Can this product be repainted, and will it void the warranty?

The product can be repainted, but doing so will void the warranty before the 10-year period has ended. However, touch-up is allowed if the product needs it, and touch-up kits are sold with the product.

13. Is the warranty transferable to other owners?

The LP Elements Performance Fencing Limited Warranty provides coverage to the original owner and next owner (“Owner”) of the Product for a period of 10 years from the purchase date of the product.

14. Are gaps required or can the product be butted up tight together to provide privacy?

LP Elements Performance Fencing is designed to be a true privacy fence with no shrinking, swelling or expanding such that the product can be installed with or without gaps.
