LP SolidStart I-Joists shall be designed to carry all applied loads including the suspended ceiling. The suspended ceiling load can be either a concentrated (point) or uniform distributed load depending on the number and spacing of assemblies.

- 1/8" minimal gap between block and flange
- Connect 2x4's with min. three 10d (3") nails per end, clinched when exposed.
- Max. Assembly Capacity 180 lbs.
- 2x4 cross member requires two 16d (3-1/2") nails per end
- Ceiling Joist- Sway bracing by others, if required.
