

SOLIDSTART®
ENGINEERED WOOD LSL

LSL Door Component Applications

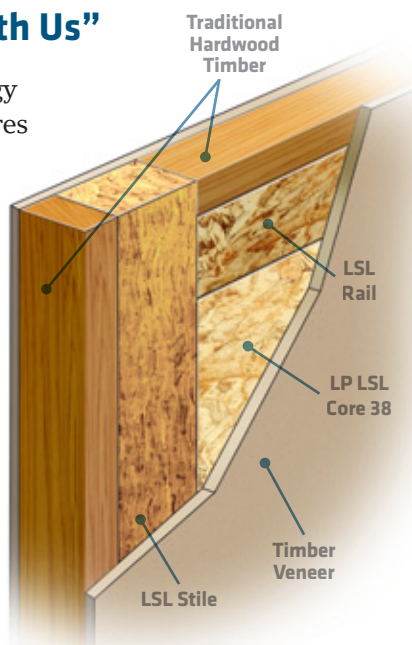

Engineered For Doors By The Engineered Wood Leader

Put Strength And Consistency Inside Every Door

LP® SolidStart® LSL (Laminated Strand Lumber) is the ideal choice for your door component needs. Our LSL is predictable and uniform, helping to make certain that your door will turn out as expected, every time. LP SolidStart LSL provides excellent dimensional stability and resists splitting, warping, cupping, shrinking and delamination. It also offers outstanding fastener capability, holds screws tight, and is available in standard or custom metric dimensions. Offered in multiple grades and densities, it delivers several advantages over conventional timber, hardwood and MDF when used in rail, stile and core applications.

Why You Should “Build With Us”

An industry leader in strand technology for more than 40 years, LP manufactures high-performance, cost-efficient engineered wood materials that are designed to outperform traditional timber. With a focus on consistent quality and product innovation, all LP products are developed with the customer’s end-use application in mind. When you use LP products, you have access to solid warranties* as well as excellent technical support and customer service. These are only a few of the reasons you should “Build With Us.”

- The perfect solution!
- Makes for a strong, secure door
- Durable and consistent
- Free of knots and other natural defects
- Customizable to your needs
- Great fastener gripping capabilities
- Used in fire, sound, climate, ballistic, x-ray and security doors
