

LP®

BUILDING PRODUCTS

Conserve. Create. Renew.

At LP, our approach to the environment can be summed up with three words: conserve, create, and renew. As a leader in the building products industry, we view it as our responsibility to be good stewards of the environment and to develop and manufacture products that help builders build better homes.

To us, “green” is about conserving natural resources, creating products that help builders reduce waste, and finding ways to utilize renewable energy sources and reduce waste throughout our operations.

Conserving Natural Resources

LP’s OSB, structural framing, and exterior siding products are made from wood - a renewable, natural resource.

To ensure that we are being good stewards when it comes to our use of natural resources, we participate in the Sustainable Forestry Initiative® (SFI), which promotes sustainable

forestry management.

LP adheres to strict guidelines and third-party audits of our fiber sourcing and forest management programs, and our participation in SFI helps ensure that the wood used to make our products comes from well-managed forests.

Through our participation in SFI, we monitor the lands and operations that produce our wood supply in order to maintain wildlife habitat and water and soil quality.

Another way that we help conserve resources: we use the entire log in our manufacturing process. The design of our equipment enables us to efficiently utilize the majority of the log with minimal waste. And any wood waste that does occur is used in our bark burners, which help provide the energy that is used to fuel the operation of our mills. We are also mindful of indoor air quality throughout our manufacturing process; we only use low-emitting resins and do not add urea-formaldehyde to any of our products.

Creating Efficient Products

LP's products are made of engineered wood. Our manufacturing processes allow us to create high-quality engineered products that utilize fewer raw materials and are more consistent than traditional lumber products.

The consistency of our engineered products helps reduce material waste and saves builders time and money

throughout the construction process. To sum it up, our products help builders build better homes more efficiently.

Utilizing Renewable Energy Sources

At this time, our renewability efforts are primarily focused on increasing the efficiency of the biomass fuel generated at our facilities. Currently, 74% of the energy used in our manufacturing process comes from biomass energy that is produced on site.

LP is also committed to finding new ways to conserve energy throughout our operations. Our company-wide PowerForward initiative empowers all LP employees to generate new ideas and implement energy-saving solutions.

To learn more about LP's environmental approach and to find out why the nation's leading builders choose engineered wood materials from LP Building Products, contact your LP sales representative, visit www.lpcorp.com, or call 888.820.0325.
