General

• At the time of manufacture, siding meets or exceeds the performance standards set forth in ICC-ES AC321 and has achieved code recognition under ESR-1301, CCMC 11826-L, APA recognition under PR-N124, and HUD recognition under HUD-MR# 1318c. For copies of Product Approvals go online at https://lpcorp.com/resources/product-literature/ or call LP Customer Support at 800-648-6893.

• Strand Substrate panel siding with SilverTech or SmartFinish is specifically for sheds and other outdoor structures where the interior wall cavities will remain permanently exposed.

• Minimum 6 inch clearance must be maintained between siding and finish grade (ground cover).

• Siding applied adjacent to porches, patios, walks, etc. must have a clearance of at least 1 inch above any surface.

• Minimum 1 inch clearance at intersection with roof line

• Apply siding in a manner that prevents moisture intrusion and water buildup.

• All wood substrate that is exposed to the weather must be sealed in a manner that prevents moisture intrusion and water build up.
  - Seal ALL exposed cuts of siding and trim. Field spray applied coatings on cuts are not recommended.
  - Sealing can be accomplished by applying a coating or sealant according to the manufacturer’s requirements.

• All exposed wood substrate must be sealed in a manner that prevents moisture intrusion and water buildup.

• LP does not recommend LP SmartSide Panel for use in ICF assemblies. If used, LP will not warrant for Buckling and Shrinkage. However, balance of warranty does remain intact.

• Use nails to fasten LP SmartSide panel siding to structural framing. The use of alternate fasteners such as staples is permissible only when allowed by I-Codes and where the size, embedment, placement, and number of alternate fasteners is designed by a licensed design professional and approved by local building official. The use of alternate fasteners, however, is not recommended and LP will not warrant any damage or performance failures to the extent caused by using any alternate fasteners.

• SIDING MUST NOT BE IN DIRECT CONTACT WITH MASONRY, CONCRETE, BRICK, STONE, STUCCO OR MORTAR.

Storage

• Store off the ground well supported, on a flat surface, under a roof or separate waterproof covering

• Keep siding clean and dry. Inspect prior to application.

Stud Spacing

• Strand Substrate 38 and 76 Series panel siding must be installed with the long dimension vertically on studs spaced max. 16 inch o.c. When installing on 24 inch o.c. framing, 190 Series panel siding is required.

Moisture

• Moisture control and water vapor control are critical elements of proper housing design. Check your local building codes for application procedures for handling moisture and water vapor in your area.

• When using wet blown cellulose insulation, the insulation must not be in direct contact with the siding and it must be allowed to dry a minimum of 24 hours or longer if specified by the insulation manufacturer.

• As with all wood products, do not apply engineered wood siding to a structure having excessive moisture conditions such as drying concrete, plaster or wet blown cellulose insulation. If such conditions exist, the building should be well ventilated to allow it to dry prior to the application of the siding.

• Siding must not be applied to green or crooked structural framing members. Do not apply siding over rain-soaked or buckled sheathing materials.

• Gutters are recommended for control of roof water run off.

Secondary Water-Resistive Barrier (WRB)

• LP strongly recommends the use of a secondary water-resistive barrier behind all LP SmartSide siding. A properly installed WRB provides a second line of defense to incidental moisture behind the siding.

• The LP SmartSide limited warranty does not expressly or implicitly cover water penetration. LP does not assume responsibility for any water penetration.

• Sheds and other accessory structures that are not heated or cooled do not require a secondary WRB if exempt by applicable building codes.

Gaps & Sealants

• Seal all gaps with a high-quality, non-hardening, paintable sealant. Follow the sealant manufacturer’s instructions for application.

• Use an exterior-quality, non-hardening, paintable sealant. Use Class 25 or higher exterior sealant meeting the ASTM C920 Standard for Specification for Elastomeric Joint Sealants. Follow the sealant manufacturer’s instructions for application.
**FLAShING, WINDOWS, DOORS & OPENINGS**

- All openings must be properly sealed or flashed in a manner that prevents moisture intrusion or buildup. Several examples that accomplish this are shown on the following pages.

**KicK-OuT FLAShING**

- Install kick-out flashing to direct the water into the gutter
- Install step flashing with minimum 4 inch upper leg
- Properly integrate flashing with the secondary water-resistant barrier. Use housewrap, flashing tape, Z-flashing, or other items as needed to maintain the counterflashing principle.
- DO NOT extend the siding or trim into the kick-out flashing or gutter
- Maintain a clearance between the end of the gutter and the adjoining wall to allow for proper maintenance of the siding
- Prime and paint ALL exposed cut edges

**TRIM**

Trim should be thick enough so the siding does not extend beyond the face of the trim.

- Trim and fascia must be applied in a manner that will not allow moisture intrusion or water buildup.
- LP® SmartSide® siding is not designed and/or manufactured to be used as trim or fascia. LP SmartSide trim and fascia are available in a variety of dimensions.

**FINisHINg INSTRUCTIONS**

- Prime and paint all exposed surfaces including all drip edges or where water will hang.

---

**Application Instructions (cont.)**

- Apply finish coat as soon as possible or within 180 days of application.
- High-quality acrylic latex paint, specially formulated for use on wood and engineered wood substrates, is highly recommended. Semi-gloss or satin finish oil or alkyd paints are acceptable. For flat alkyd paint, please check with the coating manufacturer for their recommendations for use on composite wood siding.
- Follow the coating manufacturer’s application and maintenance instructions.

**DO NOT USE**

- Stain.
- Vinyl-based paint (like vinyl acetate, or PVA).

**HANDLE PREFINISHED LP SMARTSIDE PRODUCTS WITH EXTREME CARE DURING STORAGE AND APPLICATION. TOUCH UP ANY DAMAGE TO THE FINISH THAT MAY OCCUR DURING APPLICATION PER PREFINISHERS SPECIFICATIONS.**

**NAILING INSTRUCTIONS**

- In braced wall assemblies, use minimum (0.113 inch shank diameter) hot-dipped galvanized nails for 38 and 76 Series panels and minimum (0.131 inch shank diameter) for 190 Series panels. Do not use electroplated fasteners. Refer to your local building code to verify the minimum allowable fastener size.
- Penetrate structural framing or wood structural panels and structural framing a minimum of 1-1/2 inches.
- For 76 and 190 Series panels, single nailing meets wall bracing requirements. To meet the equivalent 3/8 inch shear wall design values, double nailing procedures must be used. It may be necessary to angle drive the second nail in order to penetrate the framing. Seal nails driven below the surface.
- For 38 Series panels, double nailing procedure meets wall bracing requirements and 5/16 inch shear wall design values.

**Figure 1**

**Figure 2**
• Shear values for panels applied directly to studs shall be no greater than noted in Table 1 of the ICC-ES Report ESR-1301 or Table 1 of APA PR-N124.

• **Not warranted for application on ICF assemblies.**

• 38 and 76 Series panels must be installed on 16 inch o.c. framing only. When installing on 24 inch o.c. framing, 190 Series panels are required.

• Backside of panel must not come in contact with masonry or concrete foundation.

• Do not force siding into place. Maintain the illustrated 1/8 inch gap behind the joint to allow for expansion while the panel equilibrates with the local environment.

• **DO NOT INSTALL OVER ALIGNMENT BEAD.** Install panels in light contact to the edge of alignment bead. (see Figure 1 and Figure 2)

• Climb cut the surface of the siding such that the rotation of the blade cuts downward on the primed or prefinished surface.

• Where siding butts window trim, door casings and masonry, etc. leave a 3/16 inch gap and seal.

**Insulated Sheathings**

LP SmartSide Sidings may be installed over low-compression rigid foam or exterior gypsum. The following precautions must be followed:

a) Adequate bracing of the wall in accordance with the International Codes or other ruling building code is required.

b) For rigid foam sheathing up to 1 inch (25 mm) thick, siding may be nailed directly to the foam sheathing unless a drainage plane is required by the local building code. Nail length must be increased to ensure a minimum 1-1/2 inch (38 mm) fastener penetration into the structural framing.

c) For rigid foam sheathing greater than 1 inch (25 mm), a minimum 1-1/2 inch (38 mm) thick by 3-1/2 inch (89 mm) wide vertical strapping or furring strip must be installed over the sheathing to provide a solid, level nailing base for the siding. The strapping must be securely fastened to structural framing spaced no greater than 16 inches o.c. (406 mm) with a minimum nail penetration of 1-1/2 inches (38 mm) and a maximum nail spacing no greater than the width of the siding.

Louisiana-Pacific Corporation will assume no responsibility for any damage or condition arising from the use of rigid foam or exterior gypsum.

**1 IN. ROOF & CHIMNEY CLEARANCE**

**LP SMARTSIDE PANEL SIDING JOINT DETAILS**

**HORIZONTAL WALL JOINTS**

**BUTT & FLASH**

- 3/8" min. gap
- Siding
- Blocking
- Sloped flashing with 4" vertical leg
- 1" min. overlap

**LAP**

- Siding
- Blocking
- Lap top panel over bottom panel
- 1" min. overlap

**LAPPED HORIZONTAL WALL JOINT**

- Siding
- Framing (band joist, truss chord, etc.)
- Wall Framing
- 1" min. overlap

---

**CONDITION**

- Snug
- Flush
- Visible fiber
- Countersunk 1/16"-1/8"
- Countersunk more than 1/8"

**CORRECTION**

- OK
- Paint
- Apply sealant
- Apply sealant and re-nail
**Panel Siding Joint Details (cont.)**

**Horizontal Beltline Joints**

For multi-story buildings, make provisions at horizontal joints for “setting” shrinkage of framing, especially when applying.

LP panel sidings are accepted by the State of California as category 8140- Exterior wall siding and sheathing for Wildland Urban Interface (WUI) applications. For WUI compliance, install LP panel sidings in accordance with Louisiana-Pacific’s printed application instructions with the addition of fire retardant seal (UL Listed fire caulk, nominal 1/4 inch bead) in the vertical joint and nailing pattern of 3 inch o.c. perimeter nailing / 8 inch o.c. field nailing. Look for the California State Fire Marshal Office label on our siding.

The Louisiana-Pacific Corporation (“LP”) LP SmartSide Siding (the “Products”) limited warranty (the “Warranty”) applies only to structures on which the Products have been applied, finished and maintained in accordance with the published application, finishing and maintenance instructions in effect at the time of application. The failure to follow such application, finishing or maintenance instructions will void the Warranty as to the portion of the Products affected by the variance (the “Affected Products”).

LP assumes no liability for any loss or damage sustained by the Affected Products and is expressly released by the purchaser or owner from any such loss or liability.

Any modification of the Warranty’s application, finishing or maintenance requirements is void and unenforceable unless approved in writing prior to application by the Siding General Manager or his designee and a member of the LP Legal Department.

For a copy of the warranty or for installation and technical support, visit the LP SmartSide product support Web site at:

www.lpsmartside.com

or for additional support call 800-648-6893.

**Warranty Remedies are Not Available if Requirements are Not Followed.**

**Cal. Prop 65 Warning:** Use of this product may result in exposure to wood dust, known to the State of California to cause cancer.
