

SHIELD YOUR BUILD WITH THE ORIGINAL AND #1 BRAND OF RADIANT BARRIER SHEATHING.

More than 25 years ago, LP launched an innovative solution to combat rising temperatures and increased energy bills: LP® TechShield® Radiant Barrier Sheathing. Since that time, it's been installed on more than 2 million homes, earning a reputation as the #1 brand of radiant barrier sheathing due to its technological enhancements and proven performance.

LP® TechShield® ZB is treated with zinc borate, a naturally-occurring mineral that helps protect against termites and fungal decay.

MADE WITH INNOVATIVE TECHNOLOGY

- Created by laminating a thin aluminum-based overlay to LP® OSB roof sheathing panels treated with zinc borate
- Post-lamination, the product undergoes an incising process to create VaporVents™, a beneficial feature that is unique to the LP® TechShield® brand

INHERENTLY SUSTAINABLE

- Combines roof sheathing and radiant barrier in one efficient panel, helping reduce labor
- Made from wood, a renewable resource
- 100% SFI® Fiber Sourcing Certified

- **Helps boost energy efficiency**
- **Installs like conventional roof sheathing, requiring no additional labor**
- **Helps resist termites and fungal decay**

IMPROVES ENERGY EFFICIENCY

- Helps block up to 97% of the radiant heat in the panel from entering into the attic
- Can reduce attic temperature by up to 30° F
- Helps reduce the burden on air systems and may lower energy consumption
- May help builders qualify for various energy codes and lower HERS scores

PROTECTS AGAINST MOISTURE

- VaporVents™ Technology allows panel to dry more quickly than other radiant barrier panels when exposed to moisture during construction
- Allows for continued moisture evaporation after installation
